

FalseType

```
classDiagram
    class FalseType {
    }
    class SpecializedClass {
        ros::message_traits
        ::IsFixedSize< ::jaco
        _msgs::ArmPoseActionResult
        _< ContainerAllocator > const >
    }
    SpecializedClass --|> FalseType
```

The diagram illustrates a class hierarchy. At the top is a class named 'FalseType' with three empty compartments. Below it is a more complex class with a first compartment containing C++-style code, and two additional empty compartments below it. A blue arrow with an open triangular head points from the top of the lower class to the bottom of the 'FalseType' class, indicating inheritance.

ros::message_traits
::IsFixedSize< ::jaco
_msgs::ArmPoseActionResult
_< ContainerAllocator > const >
