

TrueType

```
classDiagram
    class TrueType
    class ros_message_traits["ros::message_traits"]
    ros_message_traits --|> TrueType
```

The diagram shows a class hierarchy. At the bottom is a gray-shaded box representing the base class, `ros::message_traits`. It contains the text `::IsFixedSize< ::jaco_msgs::StartRequest_< ContainerAllocator > >` in its top section, with two empty sections below. Above it is a white box representing the derived class, `TrueType`, which has three sections. A blue arrow with an open triangular head points from the top section of the base class to the bottom section of the derived class, indicating inheritance.

ros::message_traits
::IsFixedSize< ::jaco
msgs::StartRequest<
ContainerAllocator > >
