

TrueType

```
classDiagram
    class TrueType
    class ros_message_traits["ros::message_traits"]
    ros_message_traits --|> TrueType
```

The diagram illustrates an inheritance relationship. At the bottom is a gray-shaded box representing the `ros::message_traits` class. It contains the text `ros::message_traits`, `::IsMessage< ::jaco`, `_msgs::JointVelocity`, `_< ContainerAllocator`, and `> const >`. Above this box is a white box representing the `TrueType` class, which is empty except for its name. A blue arrow with an open triangular head points from the `ros::message_traits` box to the `TrueType` box, indicating that `TrueType` inherits from `ros::message_traits`.

```
ros::message_traits
::IsMessage< ::jaco
_msgs::JointVelocity
_< ContainerAllocator
> const >
```
